FOSTER

FOSTER

THE LOVE OF ARTISTIC BEAUTY

The Foster product collection represents the synthesis of Foster's trademark love of artistic beauty, which emphasises and highlights the details of each product, designed to be functional yet distinctive. Manufactured products speak to us through material, form and colour. It is through the perception of the senses that we can grasp the beauty of design made in Foster. Palazzo Terranova is Foster's headquarters, but it is also a testament to the company's love of art. We breathe art every day in its frescoed halls, and it's only natural that it should be infused into each of our products. The Palazzo, a former 17th century Franciscan convent, became the company's headquarters in 1988, after extensive conservation work that

restored the splendour of the frescoes and brought ancient historical objects to light. Palazzo Terranova is a heritage that the company wanted to return to the community with all its history and beauty. Foster was one of the first Italian companies to join various projects to safeguard and protect the area. Research, style and beauty in a single sign: the Foster brand. The desire to always find new solutions to improve the quality of life in the kitchen is the driving force behind our research. In the numerous proposals in the Foster catalogue, everyone can find the product that expresses their own style and the solution that best suits the space and needs of their kitchen, interpreting very different tastes and cultures.

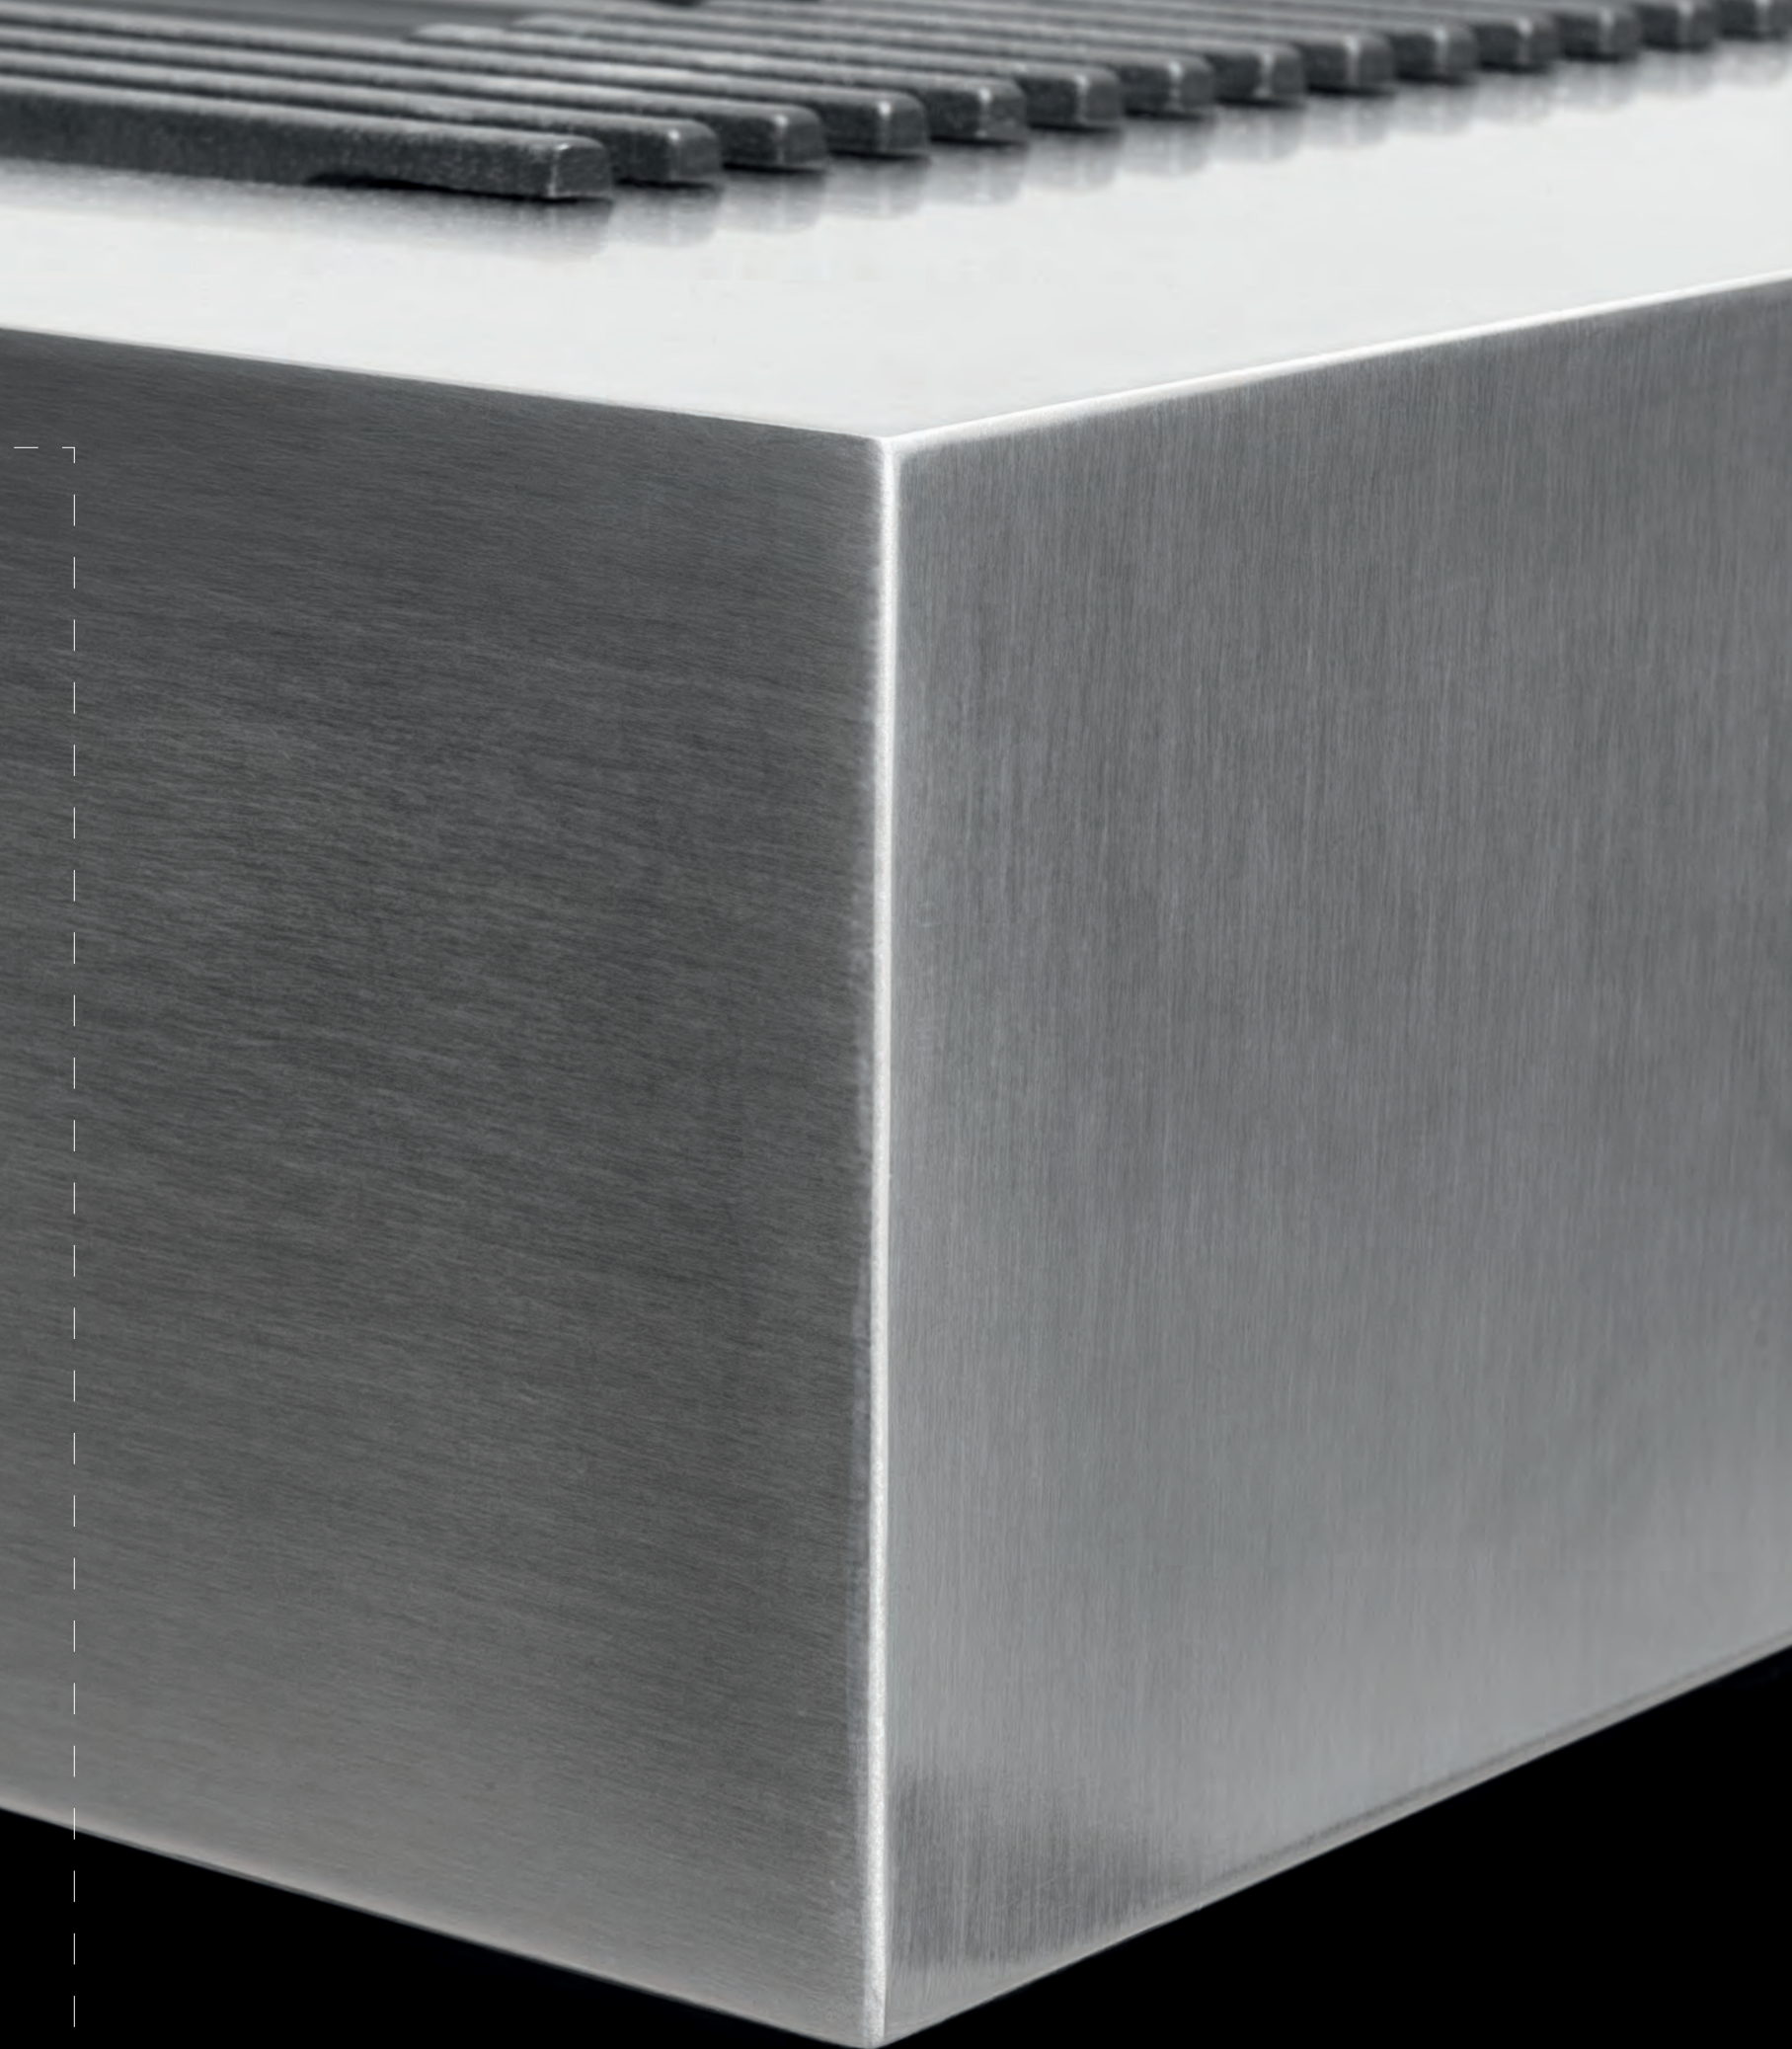

SYNERGIE

THE PRODUCT IS THE RESULT OF THE CONTAMINATION BETWEEN ART AND TECHNIQUE

Foster is Italian design, tradition and a love of art reflected in attention to detail and craftsmanship, combined with research and innovation. Foster is a group of four companies that, thanks to their synergy, are able to offer a complete kitchen project. Skills and know-how are the basis on which we meet international challenges, offering our products to different cultures and needs in over twenty countries around the world. Foster's success among the world's leading kitchen manufacturers is certainly due to its great ability to design and create customised solutions for its kitchens, interpreting very different tastes and cultures. For years we have been working with the best national and international brands, responding to their needs. The aim has always been to give the product a personal character, and the design must be timeless. The contamination of technology, art and craftsmanship is the Foster

Group's trump card. Machines shape steel, but the ability to achieve extreme levels of steel use is very important. The extreme shapes are due to the experience of Foster's steel craftsmen. The use of state-of-the-art technology and the know-how of the past are the beating heart at the centre of every Foster product. A team of highly specialised professionals is able to create stainless steel products with a very high technological and artistic content and to meticulously control the entire production chain, from the selection of raw materials to the final tests. The moulds are made entirely in-house, thanks to the great expertise that characterises our corporate culture. The surface finishes of Foster steel are the result of meticulous research and are finished by hand to achieve uniqueness even in the industrial product.

THE RAW MATERIAL

STAINLESS STEEL AISI 304

Foster chooses high quality stainless steel, which is thicker than average, resulting in stronger, more corrosion resistant and extremely durable products. It is an environmentally friendly and fully recyclable material. It guarantees maximum hygiene and ease of cleaning. Its versatility allows it to adapt to any aesthetic while maintaining its identity in substance. Its ductility lends itself to Foster's typical creativity and experimentation. Steel is imagined as a form, moulded and then treated in a hand-

crafted way in the realisation of customised projects and in the finishes: welding, brushing, realisation of the Vintage finish, always handmade, again. Foster questions the possibilities of this material every day, asking it to be something more, constantly extending its limits of use.

This is the challenge for Foster's craftsmen: to translate steel into different contexts, from water to fire, to colour it to give it a new voice and a new expressiveness.

FOSTER'S PVD

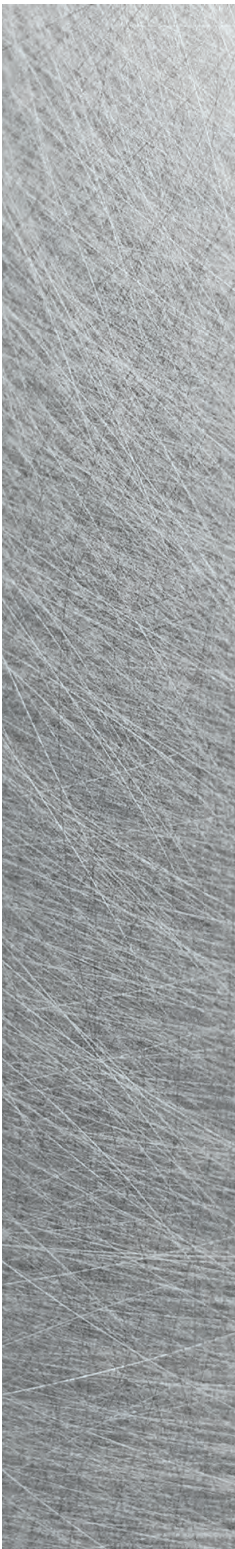

EXPERIMENTATION AND RESEARCH

Foster's PVD is the result of years of research and experience, which have resulted in technical colourings that can withstand time and wear. The PVD quality of Foster products is unique and recognised by the market as a synonym of reliability. Stainless steel becomes the real protagonist, thanks to its versatility and ability to create new aesthetics.

WATER & FIRE

BETWEEN FUNCTION AND AESTHETICS

Foster has increasingly extended the boundaries of his use of steel. Steel in different contexts, to be effective from water to fire. The focus is on designing a kitchen space that can be complemented by a range of high-performance appliances with a distinctive design. In terms of design, this translates for us into the creation of product collections comprising sinks and accessories combined with cooktops that are united not

only in the steel finishes but also in the installation edges, to suit the most varied kitchen projects. The cabinet size indicated refers to the size of the bowl. Depending on the kitchen manufacturer's product specifications, it may be necessary to reduce the thickness of the cabinet shoulders in order to facilitate the tightening of the fixing brackets.

CONVIVIO

A TRUE FUNCTIONAL CENTRE

A sink designed to be more than just a sink. The enclosures that characterise the design are sculpted to give shape to different usage scenarios. Spice containers, chopping boards, trays and containers of different sizes alternate. With a simple gesture, they can be stacked so that they are always at hand and hidden by grids made of durable material. In addition to the classic stainless steel version, the Convivio sink is also available in the Foster PVD finishes.

RIVA

DISTINGUISHING FEATURES

Foster Riva is a collection of sinks created with an ingenious design, with a system of three basins where the accessories are housed on separate levels. On the first one, the innovative Foster Black grates slide, strongly characterising its aesthetics and functionality. They are also ideal for creating an elegant cover to keep the kitchen area tidy at all times. They are hygienic, very light, durable and easy to clean. They are also 100% ecological, a choice that respects nature and the environment.

FUNCTIONAL DETAILS

THE DIAMOND BOTTOM

Foster's diamond-shaped bowl base gives a unique character to the sinks. Foster manufactures diamond-shaped bowl bases by hand with a precise bending that guarantees perfect water drainage. The drainage of water in the diamond-shaped bowl bases is always carefully considered in Foster solutions. In the flat-bottomed square models, drainage is guaranteed by the elegant diamond pattern that facilitates water drainage.

SINKS

Practical and sliding, Foster's Black grids become a practical drip tray for storing dishes and utensils. Functional and ingenious, they can be turned by 90° and placed at the bottom of the bowl, thus ensuring a multitude of solutions. The attention to detail that has always distinguished Foster has led our technicians to design special grooves between the slots of the Black Foster grids that prevent water from spraying onto the kitchen worktop, thus guaranteeing unequalled practicality.

OPERA

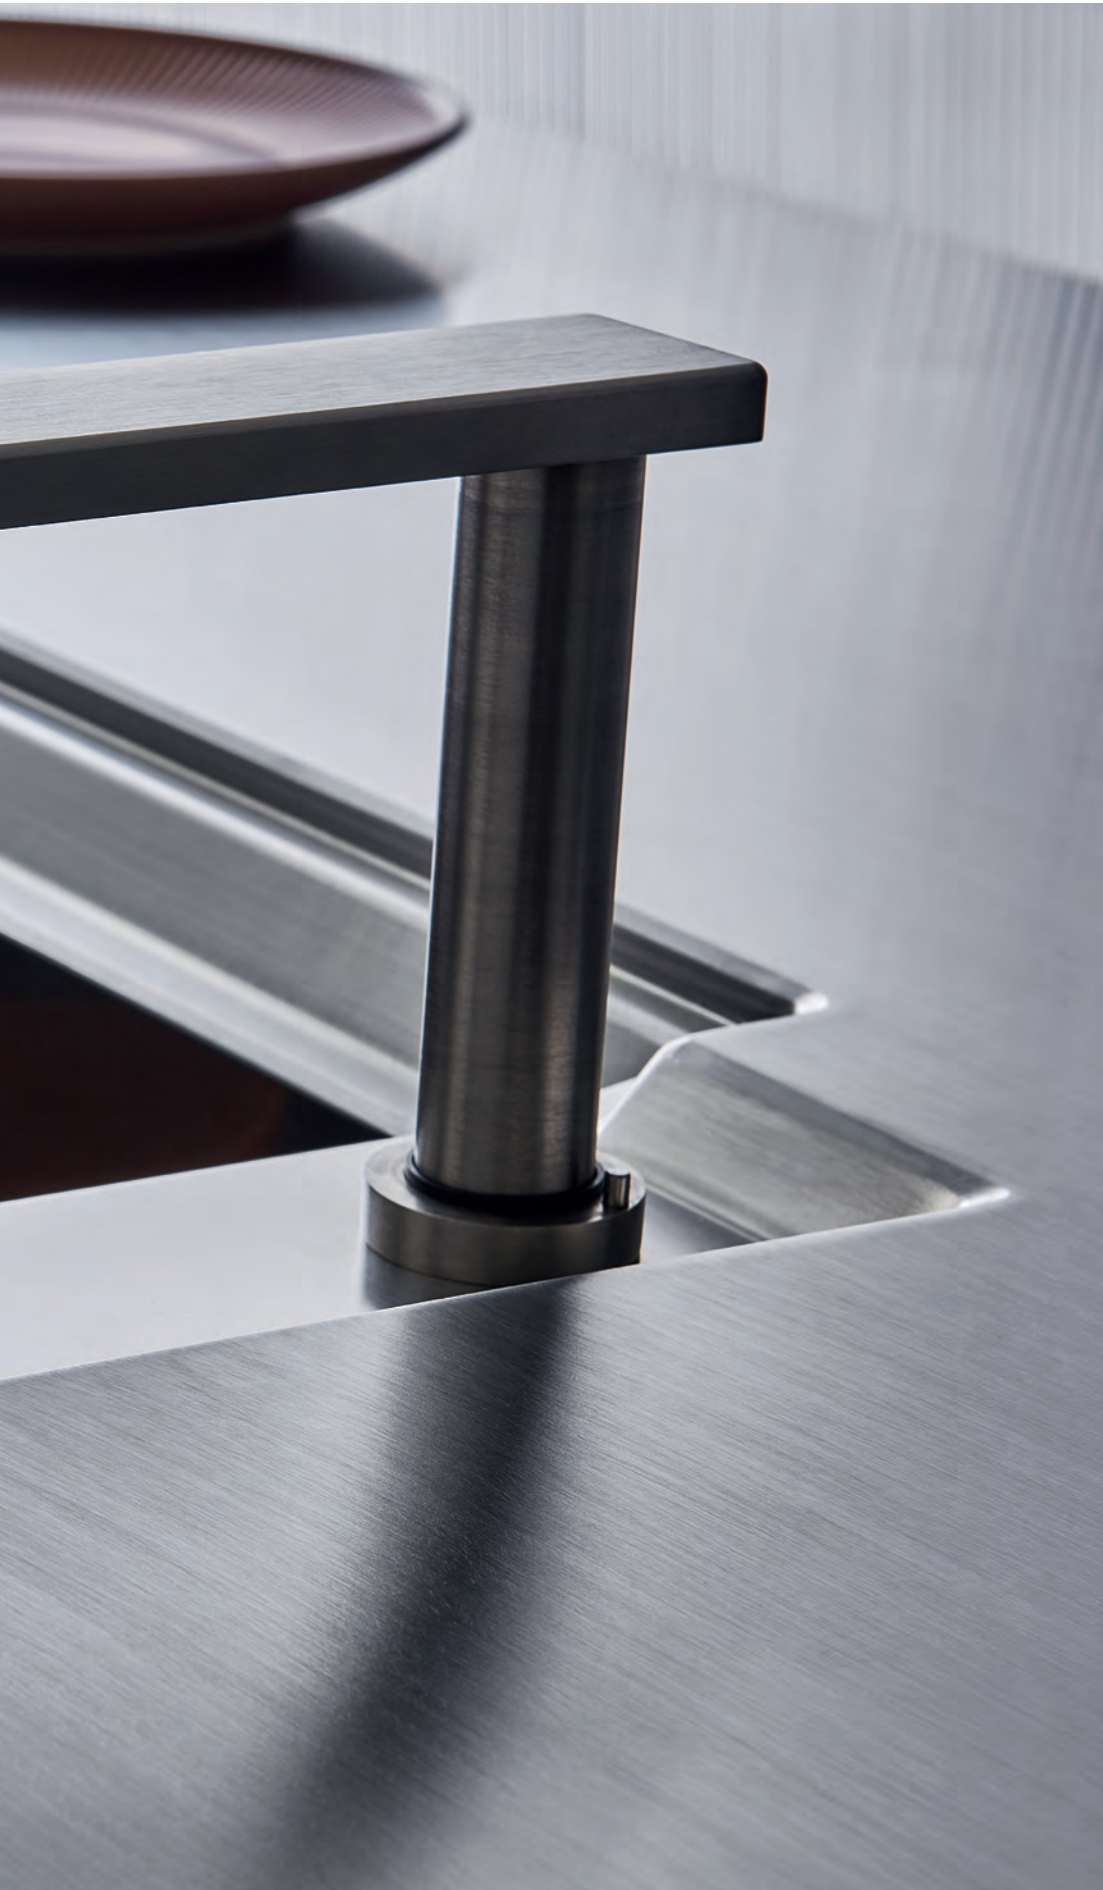

PRECIOUS INLAYS IN STAINLESS STEEL

The inlays that frame the bowl of the Opera sink appear to have been sculpted by hand. Geometric and concentric, they surround the perimeter of the sink and create support bases for a series of grates and containers. It is possible to create different work areas that disappear below the level of the top.

INTEGRATING THE ELEMENTS

On the right-hand side, the sink is prepared for the installation of the mixer tap. This integrated compartment allows the mixer tap area to be concealed and is ideal for the model with a concealed spout.

INTRIGO

THE MERGING OF ELEMENTS

Intrigo is a sink designed from a single skin, a single body that integrates separate elements into a single entity. Intrigo is a new point of view in design that results in a product with continuous surfaces that, through its aesthetics, tells us a story in different finishes

FLUSH-MOUNT INSTALLATION

The Intrigo sink is available in sizes designed for small spaces. The drain is integrated into the body of the bowl, allowing maximum cleaning and preventing the accumulation of residues.

UNIKA

MULTIPLE SOLUTIONS

The Foster Unika collection is a kitchen sink classic for minimal aesthetics combined with maximum practicality. Square-shaped, with a modern design and increased capacity, the bowls reach a significant depth of over 20 cm, thanks to advanced production technology that offers great capacity and convenience in all washing operations.

VINTAGE

VINTAGE FINISH

Foster Vintage is the ideal finish to give your kitchen a retro touch. Thanks to a precise brushing process using fine plant fibre brushes, Foster has created a special texture that is not afraid of scratches or nicks.

Satin finish

DETAILS AND COMBINATIONS

The vintage finish further enhances the PVD Foster colours that are applied to the Unika undermount models. The finish of the sink contrasts with the chrome finish of the drain basket and overflow cover, offering the possibility of creating a perfect match with the Verona mixers.

SINKS

The accessories are also designed to match the look of the washing area and make it even more functional. Thanks to the PVD, the sink becomes an accent piece that stands out in the kitchen space, giving a touch of colour that warms up the room with class and a distinctive elegance.

Foster

**GO&STOP DEVICE**

Activates the plates initially at maximum power, until the set level is reached

**RECALL**

The function allows immediate recall of the last settings selected in the previous cooking process

**POWER BOOST**

When the Booster is activated, the plate runs for ten minutes at a very high power level, which makes it possible to, for example, quickly heat up large quantities of water

**DOUBLE POWER BOOST**

Two additional power boost settings up to 3700 W, usable on a single zone or spread over the entire extended bridge zone (if present)

**POT LOCALIZATION**

It recognises which zone the pan is placed on and automatically activates the relevant controls to adjust the power

**SMART FAN SYSTEM**

The Foster system automatically adjusts the optimal ventilation level according to the temperatures reached

**END-OF-COOKING PROGRAM**

All operations are set via touch controls on the cooktop glass. Each hotplate is equipped with independent programming that allows you to set different cooking times

**T-CHEF**

It allows to set particular temperatures (42 °C, 70 °C, 94 °C) and keep them constant during cooking. This makes it easy to achieve elaborate preparations with true chef's results. Bain-marie preparations, custard or béchamel will always be perfect, as will slow cooking at low temperatures. By setting the temperature close to boiling, the cooking liquids will immediately come up to temperature when needed, increasing speed and performance

**HEAT MAINTENANCE**

It allows to keep food at a temperature of 70°C in a gentle way, without reaching boiling temperatures or burning the cooking juices

**TIMER**

A convenient timer that is independent of end-of-cooking programming

**SLIDER CONTROL**

The selected temperature can be set very quickly with the Slider control: simply touch the touch display to the desired power level with one finger

**POT DETECTOR**

Foster cooktop not only recognise the presence of pots and pans, but also calculate their surface area. This system allows an even more efficient use of energy. Moreover, when the pan is removed, the plate is automatically deactivated

**BRIDGE**

The Bridge function allows two zones to be combined to form a single large cooking zone, available for large pots or for multiple simultaneous cooking, with maximum flexibility in positioning. Thanks to the Double Booster, the exceptional power of 3700 W can be concentrated on a single plate or made available evenly over the extended surface area

**SAFETY**

All Foster electric hobs are equipped with the most modern and sophisticated safety protections: centralized stop, safety lock, residual heat indicators. The induction models also have the following functions: Safety system, which turns off the hob if no pans are present; Overflow detector, which automatically turns off the hob if liquid overflows; Automatic deactivation, to avoid accidents due to forgetfulness.

**POWER CONTROL**

The PowerControl function allows free use of induction technology, even with standard 3 kW appliances. In fact, the user can easily change the maximum absorption level of the hob, from a minimum of 2.8 kW to the "no restriction" solution. Once the maximum power is set, we can forget about the absorption, as the Foster induction hob will warn us of any limit, leaving us the choice to distribute the power as we wish. At any time, the hob can be easily reprogrammed to change or remove the power limit.

GEMMA

CERAMIC GLASS AND STEEL

Steel sculpted to fit induction technology. The combination of materials of the bevelled glass-ceramic modules and the steel in PVD colours for a valuable and versatile cooking area.

0/1 0 III
Foster
induction
9 P II

THE CORNER COOKTOP

The angular design creates elegant cooking zones that optimise space without sacrificing comfort. Thanks to the slight elevation of the cooking modules in relation to the steel top, pans can slide from one position to another without losing contact with the glass-ceramic surface.

SPACE

UNLIMITED COOKING SPACE

Space is the first Foster hob in which the cooking area knows no boundaries. Made of glass-ceramic with bevelled edges, its essential lines, thanks to the appliance's recessed design, are in line with those of the appliance itself. Built into the worktop, its essential lines blends into the kitchen surface.

I300 N00
Space induction

INDUCTION COOKTOPS

The fixed cooking zones disappear and each pan can be positioned and moved anywhere on the hob, even during cooking, thanks to the tracking system that can recognise the movement of up to 6 pans and follow them while maintaining the cooking power.

PUNTO

A WIDE RANGE OF SOLUTIONS

Simple and essential, this is the glass of the Punto collection hobs. Available in a range of sizes, the range also includes dual-zone solutions with the Bridge function, which allows two zones to be combined to form one large cooking zone, to fit into smaller spaces without sacrificing efficiency. These hobs are highly efficient, equipped with a Powerboost function and a heat retention system for preparations requiring better temperature control.

INDUCTION COOKTOPS

THE ELEGANCE OF THE DETAILS

Our induction hobs are made of glass-ceramic with a bevelled edge that allows two different types of installation, flush or above, depending on the desired effect. All operations are regulated by touch controls on the hob glass. The selected temperature can be set very quickly thanks to the Slider control: just touch the screen with a finger to reach the desired power level.

MILANO

MATCHING IN LINE

The elegance of the Milano collection, combined with the functionality of in-line burners. The ultra-flat cast-iron grates are incomparably beautiful, reminiscent of the Black grates that cover the Milano sinks. A perfect match in the kitchen. Milano also features the important metal knob designed by Foster, a detail of incomparable class.

The gas hobs are equipped with AEO high-efficiency burners with a brass ring separator. Thanks to the inclined flames, it is possible to achieve a very high efficiency, with energy savings of up to 25% compared to standard burners.
